
72v to 220v inverter production

How does a 12V to 220V inverter work?

This 12V to 220V inverter works by using a 555 timer configured to 50Hz in a stable multivibrator mode to generate square waves. These waves are then carried to the transformer, which steps up the voltage levels. The gain of the inverter depends upon the properties of the transformer, and the transformer's current rating must be greater than 2A.
