
Battery series plus inverter

What is a battery inverter?

A battery inverter, also known as a DC to AC inverter, converts the direct current (DC) stored in a battery into alternating current (AC), which is the type of current typically used in homes, businesses and industry. Battery inverters are therefore essential for making use of stored solar power.

What is the Plus version of the inverter?

This series of inverters is also available in the Plus version, equipped with a clean contact, which allows you to turn on and off devices such as wallboxes and boilers based on the overproduction of the system, maximizing self-consumption.

Do battery inverters convert 12V DC to 230V AC?

Battery inverters, converting 12V DC to 230V AC, play an important role in the operation of a PV system: PV systems generate direct current (DC) which must be converted into alternating current (AC) for use in homes, businesses, industry, and for feeding into the utility grid. This is the job of PV inverters.
