# Beirut Electricity Signal Base Station Location

How to find a base station?

Base station location in urban areas is best determined by doing round trips of city blocks. At more rural locations you should do larger sweeps to save time. You will get the best result on flat ground. Ensure that you have a sufficiently good connection to the base station as well as a GPS connection.

How can I see the location of a mapped base station?

The map opens from left side main menu. In the maps tab you can see the location of already mapped base stations. The application will automatically only show the base stations of the current network being used (LTE in the picture). The location of base stations can also be viewed from the Cellmapper webmap.

Can you measure a base station if you're in a 3G network?

You can only measure stations in the network you are actively connected to, so for instance you can't locate a 4G base station if you are in a 3G network. Usually 2G/3G/4G/4G+ cells can all be in the same base station, and even be sent from the same panel antenna.

This map represents the coverage of 2G, 3G, 4G and 5G mobile network in Beirut. See also : mobile bitrates map in Beirut and Alfa Mobile, Touch Mobile mobile networks coverage in ...
