# Can solar panels be installed on the roof of a property

Can solar panels be installed on a roof?

Yes, solar panels can be installed on most roof types, including asphalt, metal and tile. However, the installation method may vary. 2.

Can you install solar panels on asphalt shingle roofs?

Asphalt is perhaps the most popular roof material - as such, asphalt shingle solar panel installations are common and straightforward. Installers will drill studs into your roof and attach panel mounts at those locations.

Do solar panels work on metal roofs?

Depending on the type of metal roof you have, installations will differ slightly, but the big takeaway is that solar panels work well on metal roofs. If you have a standing seam metal roof, your solar installer won't have to drill holes in your roof, as panel mounts can be clamped to the raised seams.

Do I need a structural assessment before installing solar panels?

Before mounting solar panels, your roof must undergo a thorough structural assessment. Solar panels and mounting equipment add approximately 3-4 pounds per square foot of additional load to your roof structure. Key evaluation factors include: If your roof needs replacement, complete this work before solar installation.
