
Can solar panels be used directly on roofs

Do solar panels work on metal roofs?

Depending on the type of metal roof you have, installations will differ slightly, but the big takeaway is that solar panels work well on metal roofs. If you have a standing seam metal roof, your solar installer won't have to drill holes in your roof, as panel mounts can be clamped to the raised seams.

Can solar be installed on any roof?

Solar can be installed on almost any roof- here are some of the most commonly used roof materials that solar installers will encounter on the job: While solar panels can usually be safely and effectively installed on all roof materials, the exact installation processes may differ.

Do solar panels need to be drilled?

If you have a standing seam metal roof, your solar installer won't have to drill holes in your roof, as panel mounts can be clamped to the raised seams. If you're working with a corrugated metal roof, your installer must drill holes into the roof.
