# Explosion-proof portable power bank

Are power banks exploding?

The chances of a power bank exploding are very slim, but unfortunately, there have been recorded cases of power banks exploding or autocombusting. As such, many people are worried for their safety and aren't sure if they should use these devices. These rare occurrences generally happen due to factors such as poor built quality or improper use.

How do you know if a power bank is exploding?

Heat is one of the most critical indicators of a power bank explosion risk. Here's what to watch out for: It's normal for a power bank to get slightly warm while charging, but if it becomes too hot to touch, that's a major red flag. Unusual overheating could mean an internal battery fault, putting it at risk of failure or even combustion.

Are power banks safe?

Like any other electronic gadget, power banks must meet specific quality standards to be deemed safe. A certified power bank has its circuits insulated to prevent short circuits, as well as equipped with temperature control, overvoltage control, and power protection, which ensures it will stop charging once it's full.

What are the risks of using a power bank?

However, this convenience comes with potential risks if the power bank is not used properly. Improper use can lead to overheating, fires, or other safety hazards. When choosing a power bank, it's important to understand the differences between lithium-ion (Li-ion) and lithium-polymer (Li-poly) batteries.
