
Generator charging station stalled

What causes a generator to stall?

Overheating,overloading,and erratic fuel deliveryare the most common causes of mid-operation stalls. When a generator is operating beyond rated capacity or is not cooling enough due to insufficient coolant or airflow issues,the engine may shut down to protect itself from damage.

What is a standby generator?

Generators are essential backup power sources for homes, businesses, and critical facilities. Standby generators are often rarely run, which means monthly testing and a maintenance schedule are critical to ensure problems don't occur without the operator's knowledge.

Why is my portable generator not working?

A portable generator that starts but lacks power indicates an issue with electrical production. Common problems include generator overload,dirty air filters,clogged spark arrestors,and the need for potential engine servicing.

Why does my generator not start?

Battery failureis one of the most common reasons why a generator will not start. This problem can occur for a variety of reasons,and understanding them is critical to ensuring reliable performance. One common cause is sulfation - the buildup of lead sulfate crystals on the plates of lead-acid batteries.
