What are substation circuit breakers & reclosers?

Substation circuit breakers and reclosers are considered critical assets, given their important role in network protection. They are used in the network to open and close (i.e. switch) an electrical circuit under normal and fault conditions, providing safe operational control.

What does a circuit breaker do in a substation?

Circuit breakers perform two fundamental roles in substations: (1) interrupt high fault currents safely to protect equipment and limit system disturbance, and (2) provide a means of making and routing power during normal operation (switching, sectionalizing).

What is a circuit breaker?

Circuit breaker is a switching device that interrupts the faulty current and performs the function of a switch thus protecting the electrical system from damage. Its Scared to buy from other suppliers too, trust you! I placed my order on Monday and they said everything I wanted was in stock and ready to be sent to my shipping agent on Wednesday.

What is SF6 circuit breaker?

SF₆ circuit-breakers SF₆ is a high-dielectric, electronegative gas that both cools and chemically suppresses the arc by electron attachment; it allows compact interrupting chambers and high dielectric recovery after current zero. Modern SF₆ breakers use puffer or self-blast techniques to increase the gas flow through the arc.
