How long do solar inverters last?

Solar inverters don't last forever, and knowing their lifespan can save you from surprise breakdowns. On average, they'll serve you well for a decade or more. The key is understanding what affects their durability and how to extend it so your solar system runs smoothly for years.

How Long Does a Solar Inverter Last?

How long do microinverters last?

Microinverters typically showcase impressive longevity, with an average lifespan of 20-25 years, often matching the warranty period of solar panels themselves. This extended durability stems from their distributed architecture, which reduces stress on individual components.

When should a solar inverter be replaced?

Proactive planning inverter replacement is crucial for maintaining continuous solar system performance. Industry experts recommend starting replacement preparations when your inverter reaches 8-10 years of operation, even if it's still functioning well.

How long do string inverters last?

String inverters, while equally reliable, generally operate effectively for 10-15 years before requiring replacement. However, modern string inverters incorporate advanced cooling systems and robust components that can extend their operational life beyond these estimates, particularly in optimal installation conditions.
