What is the difference between a generator and a portable power station?

A portable power station is essentially a big rechargeable battery that you carry around.

Deplete it, and it's useless until you can recharge. A generator, by definition, is a device that actually converts some type of energy to usable electricity in whatever circuitry you have it connected to.

How much does a portable power station weigh?

Faster charging is especially useful if you're cycling power usage throughout the day or topping off before a storm hits. Not all portable power stations are truly "portable." Some weigh over 100 pounds, especially expandable or high-capacity systems. For RV trips or apartment use, a compact, under-50 lb model may be more manageable.
