## Portable fire power supply

What is a portable power supply?

A portable power supply is a device that can store and provide electrical energy for various purposes. It can power small appliances, charge electronic devices, or supply emergency backup power in case of a blackout. Portable power supplies are usually rechargeable and have different capacities and features depending on the intended use.

What ports do firepower system appliances use?

Firepower System appliances communicate using a two-way, SSL-encrypted communication channel, which by default uses port 8305/tcp. The system requires this port remain open for basic intra-appliance communication. Other open ports allow: In general, feature-related ports remain closed until you enable or configure the associated feature.

What type of power does the FCPS provide?

The FCPS provides regulated and filtered 24 VDC power to four notification appliance circuits configured as either two Class B (Style Y) and Class A (Style Z, with ZNAC-4 option module) or four class B only.
