What is an uninterrupted power supply (UPS) system?

Uninterruptible Power Supply (UPS) systems provide backup power during electrical outages, allowing businesses to either shut down safely or keep working until power comes back. However, picking the right UPS system can feel confusing because there are so many types and features to choose from.

What is a rotary uninterrupted power system?

A UPS is normally referred to as an uninterrupted power supply, but it's also known as uninterruptible power system. Note that rotary UPS are covered in IEC 88528-11:2004 Reciprocating internal combustion engine driven alternating current generating sets - Part 11: Rotary uninterrupted power systems - Performance requirements and test methods.

What are the different types of uninterrupted power supplies?

There are two main categories of uninterrupted power supplies (UPSs) 1, static and rotary. As the name implies, static UPSs do not have any moving parts in their converters. Whereas, rotary UPS use mechanical parts that rotate, such as motor/generators, to function. This paper focuses only on static UPSs.
