
Small and medium-sized wind power generation system in Lyon France

How is wind energy generated in France?

Wind energy is generated from the conversion of kinetic energy from wind turbines into electricity. Wind power was one of the leading electricity sources in France, with over 50 terawatt-hours generated in 2023, placing France among the most important wind power producers in the European Union.

How big is France's wind energy sector?

France's wind energy sector is on a strong growth trajectory, with 23.8 GW of installed capacity as of mid-2024, including 1.5 GW of offshore wind. While onshore wind remains dominant, offshore wind is expanding, with major projects set to increase capacity in the coming years.

Is France a leader in Europe's wind energy transition?

With continued government support, new offshore auctions, and technological advancements, France is well-positioned to remain a leader in Europe's wind energy transition. This information is updated in March 2025

How well developed is the wind power sector in France?

The wind power sector is well developed in France, with many companies located throughout the territory at all levels of the value chain (planning and design, component manufacturing, engineering and construction, and operation and maintenance).
