# Solar Onsite Energy Outdoor Prices

What is on-site solar?

On-site solar refers to a solar energy system that is installed directly on the property where the energy will be used. This is the most common form of solar energy generation for residential homes and commercial buildings.

How much does solar cost?

After applying the 30% federal tax credit, net costs typically range from \$10,500 to \$24,500. Understanding solar costs requires grasping two key metrics: cost per watt and cost per kilowatt-hour (kWh).

Is offsite solar better than onsite solar?

Regardless of the exact method, participating in offsite solar can have upsides similar to onsite. While both offsite and onsite options offer project structuring with no upfront installation costs and provide renewable energy at a fixed cost, the two system types ultimately can offer their own distinct benefits.

When is a solar system considered an onsite system?

When a solar system is installed directly on the purchaser's property, and the renewable energy that it produces is consumed there, it's considered an onsite system.

Discover how large energy users are turning to on-site power generation to offset rising capacity costs, improve reliability, and meet ...
