# Tskhinvali backup uninterruptible power supply

What is an uninterruptible power supply (UPS)?

An Uninterruptible Power Supply (UPS) is a device designed to provide backup power when the primary power source fails or when voltage levels drop below acceptable limits. UPS systems are commonly used in computers, server farms, and data centers to ensure uninterrupted operation and protect digital data from power-related disruptions.

Are battery-backed uninterruptable power supplies reliable?

Reliability of power sources is an increasing challenge in many sectors and battery-backed uninterruptable power supplies (UPS) are one option to protect and keep electronic equipment operating in the event of grid power failure.

Do you need a battery system to backup your ups power supply?

For mission critical applications, having a reliable battery system to backup your UPS power supply is essential to supporting your critical load during a power quality event.

Why do you need a reliable backup power supply?

A reliable backup power supply is essential. That's where our EverPower™ product line comes in. Because failure is simply not an option when your mission is critical, at Mitsubishi Electric, we deliver highly reliable and efficient uninterruptible power supplies, battery backups, and other peripheral equipment.

Explore Critical Power Supplies range of standby power backup power solutions, including uninterruptible power supplies (UPS) and ...

An Uninterruptible Power Supply (UPS) is a device designed to provide backup power when the primary power source fails or when ...

An Uninterruptible Power Supply features an internal lead acid battery that powers your devices for a limited time in the event of a power ...
