## Two solar panels for home use installation

How to install solar panels?

The first step in solar panel installation is fixing the mounting structure to support the panels. The whole mounting structure must be tilted and have an angle between 15 to 20 degrees to have maximum sunlight exposure. For countries in the Northern Hemisphere, the best direction to face solar panels is south because it gets maximum sunlight.

Should I install a solar power system?

Your solar power system can be: For urban homeowners, an on-grid solar panel for home system is often the most cost-effective. Professional installation ensures long-term safety and performance. A certified installer will: Always request an AMC (Annual Maintenance Contract) and ensure post-installation support.

How do I connect two solar panels together?

Connect the positive terminals of both panels together. Connect the negative terminals of both panels together. Hook up the combined positive and negative connections to the battery terminals. Secure the Connections: Tighten all connections to avoid loose or faulty wiring. Use zip ties to minimize movement.

Can you connect two solar panels to one battery?

Connecting two solar panels to one battery can significantly improve energy efficiency, especially during cloudy days or at night. This setup allows for a more reliable power source and maximizes your solar investment by increasing energy collection and storage.
