
Uninterruptible Power Supply for Mining in Singapore

Why should Singapore implement an uninterruptible power supply (UPS) system?

This transition allows traffic control and telecommunications systems to continue functioning at optimal levels without interruption. For sectors in Singapore that rely heavily on uninterrupted power, such as data centres, healthcare facilities, and government operations, implementing a robust uninterruptible power supply (UPS) system is crucial.

What is an uninterruptible power source (UPS)?

An uninterruptible power source (UPS) is an electrical equipment that provides emergency power supply to a electric load when the input power source or mains power fails. A UPS differs from an auxiliary or emergency power system or standby generator in that it will provide near-instantaneous protection from input power
