
Victoria's new outdoor power field

What is Victoria's largest wind farm?

Located in Rokewood, the 1.3GW wind farm is the largest in the southern hemisphere. It will generate 4,000 gigawatt hours (GWh) of energy annually, meeting 9% of Victoria's current energy needs. Energy and Resources Minister Lily D'Ambrosio announced the activation of the wind farm, which when fully operational will power 765,000 homes.

What is Victoria's energy plan?

"The plan attempts to minimise the area of Victoria required for renewable energy zones and the new transmission infrastructure needed, while also providing project developers and investors with sufficient opportunity to generate the energy we need to power homes, farms, schools, businesses, hospitals and other essential services."

Will Victoria get a big battery project?

The Victoria Labor government says it has fast-tracked approval of a new big battery project that will be sited next to two of the state's most recently commissioned wind farms.

What percentage of Victoria's Electricity is produced by renewables?

D'Ambrosio says more than 42 per cent of Victoria's electricity was produced by renewables in the past financial year, with the state reaching record levels of renewable energy generation. The VTP says that these figures factor in new capacity from already committed projects across the state.

These projects are aligned with Victoria's target to install 25 GW of clean energy capacity by 2035 as it prepares to shut down aging coal-fired power plants (see Australia's ...
