# What is the price difference between grade A and grade B solar panels

Are Grade B solar panels worth it?

Grade B solar panels typically fall under the market value and are sold at lower prices than grade A solar panels. If you need solar panels for a countryside barn or remote location, or they'll be far from prying eyes, they are great for performance at a reasonable price.

Are Grade A solar panels a good choice?

Ultimately, it comes down to this: Grade A solar panels have no visual defects and meet performance standards. Grade B solar panels have some visible defects but meet performance standards. Grade C solar panels have visual defects and do not meet performance standards. Grade D solar panels are unusable, and entirely broken.

Do grade B solar panels affect performance?

Grade B solar panels have some visual defects that do not affect performance. Grade B naturally falls below grade A in this grading system. So how does Grade B stack up against the other grades? Grade A solar panels are entirely free of defects. Grade B has some visual flaws but still meets performance standards.

How are solar panels graded?

Like elementary school, solar panels are graded on several factors, mainly visual and performance flaws. While this grading system follows similar logic, different manufacturers and distributors can have other criteria for their grading systems.
